

Advanced Product Filtering

Identify the exact product you're looking for from any of your manufacturer's catalogues using Fusion Design's advanced product filtering facility. This powerful mechanism allows you to search for any combination of product name, order code, description, dimensions and handing, and will consistently save you time, without the need to refer to your manufacturer's product manuals.

Flexible Perspective View

When viewing a room in perspective view, and dependent upon your viewpoint, Fusion Design can now automatically hide certain walls and associated products so that the best possible overall view of your design can be achieved quickly and easily. This facility is particularly useful when viewing smaller kitchen and bathroom designs.

OTHER NEW FEATURES AND ENHANCEMENTS

Display Available Products – Automatically remove all unavailable products from Fusion's add palette based upon the currently defined style options.

Room Style Preview – Fusion Design can now display all of your room style choices together in a single representative image. Designers and customers alike can now easily envisage how their selections will appear together. For example, how a particular door style will look when designed with a specific worktop material and finish.

Enhanced Fixture Editing – when modifying any walls within your room, Fusion Design automatically maintains the connection to any previously adjoining walls. Any fixtures, tiles and installation symbols will continue to be placed correctly on any walls that have been modified. Also, three new patterns can be applied to individual walls within the plan view to represent different types of brickwork.

Worktop Editing – Create even more complex worktop shapes using new tools with Fusion Design's worktop editing facility.
